

NEXT GEN CHATBOT ARENA

3-Hour SDG Web-Based Chatbot Challenge

Build • Integrate • Test • Compete
Official Participant Challenge Brief & Rules

1. Event Overview

Next Gen Chatbot Arena is a rapid-build competition in which participants create a web-based chatbot focused on one assigned SDG theme. The chatbot must be usable through a web interface and expose an external API endpoint so the Arena evaluation system can send standardized prompts and evaluate responses.

The objective is not to build the largest AI system. Participants are judged on how effectively they solve the assigned SDG problem within a strict three-hour build window.

2. Challenge Format

- Duration: 3 hours (180 minutes).
- Team format: team, as decided by the organizers.
- Each participant/team receives one SDG theme/challenge.
- Participants may use any permitted programming language, framework, database, UI library, or AI/LLM API.
- The final submission must include a working web chatbot and a reachable API endpoint.
- The Arena will test every submission using the same evaluation methodology.
- Participants must be able to demonstrate their chatbot at the end of the 3-hour period.

3. Ten SDG Challenge Tracks

Track	SDG	Theme	Core Task
1	SDG 1 – No Poverty	Financial Inclusion Assistant	Help users understand budgeting, savings, financial literacy, and relevant public-support resources. The chatbot should avoid pretending to provide professional financial advice.
2	SDG 2 – Zero Hunger	Food & Nutrition Assistant	Provide practical, affordable nutrition education, food-waste reduction ideas, and food-security awareness.
3	SDG 3 – Good Health & Well-being	Health Awareness Assistant	Provide general health education, prevention and healthy-lifestyle information. It must clearly avoid diagnosis and emergency-treatment claims.

4	SDG 4 – Quality Education	AI Learning Tutor	Act as a personalized tutor that explains concepts, creates questions/quizzes, gives feedback, and adapts to learner level.
5	SDG 5 – Gender Equality	Equality & Awareness Assistant	Educate users about equality, inclusion, respectful workplaces, rights, and support pathways without giving unsafe or discriminatory advice.
6	SDG 6 – Clean Water & Sanitation	Water Conservation Assistant	Help households and communities understand water conservation, sanitation, leakage reduction, and responsible water use.
7	SDG 7 – Affordable & Clean Energy	Clean Energy Advisor	Explain energy efficiency, renewable-energy concepts, household conservation practices, and sustainable choices.
8	SDG 11 – Sustainable Cities	Smart City Assistant	Help citizens with sustainable transport, waste reduction, pollution awareness, public spaces, and responsible urban living.
9	SDG 12 & 13 – Responsible Consumption & Climate Action	Climate & Sustainability Coach	Guide users toward sustainable consumption, waste reduction, climate awareness, and lower-impact lifestyle choices.
10	SDG 16 & 17 – Strong Institutions & Partnerships	Civic & Community Assistant	Help users understand civic participation, public services, community action, SDG collaboration, and responsible citizenship.

4. Three-Hour Timeline

Time	Phase	Expected Work
0–15 min	Briefing & setup	Receive track, API specification, credentials/resources, and test instructions. Confirm environment.
15–45 min	Design	Define user persona, chatbot purpose, conversation flow, prompt strategy, data/resources, and UI wireframe.

45–135 min	Build	Implement chatbot UI, backend/API endpoint, model integration, prompt guardrails, and core SDG functionality.
135–160 min	Test & improve	Run functional tests, fix errors, test edge cases, improve responses and UI.
160–175 min	Submission	Deploy/host the application, verify public access, freeze the final version, and submit required details.
175–180 min	Final check	Confirm URL, API endpoint, documentation, and demo readiness. Late changes are not guaranteed to be evaluated.

5. Mandatory Technical Requirements

- Web-based chatbot interface accessible from a browser.
- Chat input and response display must work reliably.
- External API endpoint must accept a user message and return the chatbot response in a documented format.
- Example API contract: POST /chat with JSON {"message":"..."} and response JSON {"response":"..."}.
- API should return a response within a reasonable time and use clear error handling.
- Participants must provide the deployed web URL and API endpoint URL.
- Any required API key must be stored securely on the server; never expose private keys in client-side JavaScript.
- The chatbot must remain focused on the assigned SDG challenge.
- Participants may use third-party AI/LLM APIs, subject to event rules and available credentials.

6. Recommended Architecture

7. Evaluation & Scoring

Total: 100 points

Criterion	Weight	What Judges Look For
SDG Relevance & Problem Fit	20	Does the chatbot directly solve the assigned SDG problem?
Response Quality & Helpfulness	20	Are responses clear, useful, actionable, and appropriate to the user?
Accuracy & Reliability	20	Does the chatbot avoid fabricated or misleading claims and handle uncertainty responsibly?
Functionality & Technical Quality	15	Does the web app/API work reliably, consistently, and without major errors?
Safety & Responsible AI	10	Does it avoid harmful, discriminatory, privacy-invasive, or overconfident advice?
Conversation & UX	10	Is the interaction natural, understandable, and easy to use?
Innovation	5	Does the solution demonstrate an original or particularly effective idea?

8. Arena / Blind A-B Evaluation

- The Arena may present the same prompt to two competing chatbots without revealing their identities to the judge.
- Both systems receive equivalent evaluation prompts for fairness.
- Judges/evaluation models compare responses on relevance, accuracy, helpfulness, safety, and task completion.
- Repeated tests may be used to reduce the effect of a single lucky response.
- Organizers may combine rubric scores and head-to-head results to determine final ranking.
- Participants must not attempt to detect or manipulate Arena test prompts.

9. Example Evaluation Prompts

Track	Sample Prompt
SDG 1	I have a limited monthly income. What practical steps can I take to manage my expenses and build a small emergency fund?
SDG 2	Suggest an affordable one-day meal plan that reduces food waste and provides balanced nutrition.
SDG 3	What daily habits can help improve general well-being? Clearly distinguish general education from medical diagnosis.
SDG 4	Teach me the basics of linear regression as if I am a beginner, then give me three practice questions.
SDG 5	How can a workplace create a more inclusive environment and respond appropriately to complaints?

SDG 6	Give me five practical ways to reduce household water consumption.
SDG 7	How can a household reduce electricity use without compromising essential needs?
SDG 11	Design a simple sustainable-city action plan for reducing traffic and waste in a local community.
SDG 12/13	My lifestyle creates unnecessary waste. Help me identify practical changes I can make over the next month.
SDG 16/17	How can young people participate responsibly in community decision-making and SDG projects?

10. Rules & Restrictions

- All work must be completed within the 180-minute competition window unless organizers explicitly provide starter code or pre-event setup.
- Pre-built templates, open-source libraries, and standard frameworks are allowed unless specifically prohibited by organizers.
- Do not submit a project that was built substantially before the event.
- Do not attack, overload, probe, or interfere with another participant's service or the Arena infrastructure.
- Do not attempt prompt injection against the evaluation system, manipulate scoring, or intentionally return misleading outputs.
- Do not expose API keys, passwords, private tokens, personal data, or confidential credentials.
- Do not use harmful, discriminatory, illegal, or unsafe chatbot behavior as a feature.
- External datasets/APIs must be used legally and within their terms.
- Judges' decisions regarding scoring and rule compliance are final.
